ALGiT TimeTable

Solution for you

Creating school time table is usually a painful job that gives you poor results. We wish to put an end to this. Holes in the time table, frustrations of all involved in the school process, space allocations, are all part of the history now. We know the problems of creating school time tables and we know that your time is valuable and this is why we developed ALGiT TT.

ALGiT TT is the latest concept of school time table software creation. It is optimal solution for your school. Data entry is your only job, then using the Evolution Artificial Intelligence ALGiT TT creates the schedule for your school all by itself. For every student, teacher, classroom, group teaching tools an so on.

This way, creating a school time table is not a privilege of a good combinatorians but of the every ALGiT TT user.

Save on energy and transport

Having a compact time table reduces time of school activities and consequently reduces energy consumption. You can connect it to your control system of your energy devices and the effect is even greater. You can also optimize time tables of students that drive with school buses and thus increase school savings.

Quoting the Maribor Biotechnichal school principal

The advantage of this program is that you insert all the “marginal conditions”, and then the program creates the time table. It is hard to describe all the capabilities of the program because there are so many, all I can do is recommend it and assure, you will be satisfied with this software.

Anton Krajnc, principal

Keep the school under control

Plan all the events in the school process like subjects’ timetable, morning and afternoon care, teachers meetings, extra students’ help, etc. Usually the plan is different then implementation due to the teachers or students absences and that is why suplences need a good support. Monitor all the action on the computer, smart phone or tablet.

Manage all the events using ALGiT TT

All your problems are our challange:

- Everyday changes
- Too much administration work
- Overcrowding
- Nobody for substitution, while schedule is busy
- Unequally burdened teachers
- Unsatisfied parents and students
- Poor distribution of timetable
- Too much students’ transfers
- Day care separated from timetable
- Poor information’s for students
- Elective subjects with approximation
- How and where to save
- Handling a lot of unrelated programs

Intelligent way for optimal school time table is using the ALGiT TT software

CVIU Velenje

I had a positive experience with the ALGiT TT from my previous job. ALGit TT is the only program where we can combine teachers' time tables and classrooms from the lower educational standard (45 minute hours) together with teachers and classrooms of the special program (60 minute hours).

mag. Aleksander Vališer, principal

Primary school Koroška Bela

I have been struggling with time table since June, for more than 10 years. Ever since I am using the ALGit TT I am care free. I can peacefully go on holidays and in the last week of August there is still enough time to create a time table with all the changes that usually occur just before the new school year.

Božena Oblak, ass. principal

Program description

Modules of ALGiT TT:

- Data entry and editing
- Elective subjects and groups
- Time table calculation
- Suplences
- Day care
- Internet portal

Data entry and editing

Data entry takes one whole day at the maximum and that is all that is expected from you. You need to enter classrooms, teachers, classes, subjects (basic are preinserted), students (elective and level subjects), specialties (meetings, etc.) and extra requirements (movements of teachers, etc.). You can combine different classes or students. ALGit TimeTable also supports a year time table which can change every day (faculties and professional schools)

Elective subjects

Process of elective subjects is optimized and your only job is to insert the data. You need to insert a list of elective subjects based on the history of students' choices the program creates an offer for every student. Consequently there are no false selections. Then you insert students' answers into ALGit TimeTable which, based on the rang of the subject, group size and maximum number of subjects or hours, selects the most appropriate subjects. Every student recieves a notification with a list of selected subjects on which he can object.

TimeTable calculation (using EAI)

ALGit TT works on a different principle than other competitive programs and combines them much better than any human. First it coordinates students based on groups of elective subjects, level subjects and all the others groups so that there are as few potential overlays as possible. Then is starts with a search of the solution that fits all the participants in the schedule.

Suplences

You mark all the classes and teachers that are absent, mark the hour and add a reason of absence. ALGit TT will consider all the conditions and suggest the substitutions with a possibility of a human change. You can publish the form on your internet page. The program remembers all the history and displays hours ob absence and suplences for selected period.

Reviews and reports

ALGit TimeTablehas creates a set of reports for teachers, students, principal, the main time table and all the suplences. They are suitable to be published on the internet or simply uploaded to a portal.

portal.algit.eu

ALGit TimeTable and suplences can be easily viewed on the internet. You have the reviews on classes, teachers and classrooms, and with a special password for all the students also.

Maintenance and support

ALGit TimeTable alerts you of a new version, which is installed with a click of a button. We offer support 12 hours a day.
